EXPERIENCE

Software Developer

Vision Critical

Jan. 2019 – Apr. 2019 | Vancouver, BC

- Authored a **TypeScript** micro-service to export member data with team lead. **Dockerized** and invoked through an **AWS State Machine**.
- Streamed data from both **SQL** and an optimized **Postgres** store to **S3** buckets. Capped memory usage at 50 MB processing > 10 million records.
- Discussed needs with Engineering & Product Managers and transformed data into multiple JSON and CSV formats for analytics and exports.
- Worked with the team on key ETLs moving from **SQL** to **Postgres**. Switched to a schema per tenant database design for faster data retrieval.
- Developed APIs in **C#** to re-evaluate member group filters and persist new counts. Prepared feature demo for all teams.

Software Engineer

Kooltra

May. 2018 – Aug. 2018 | Toronto, ON

- Developed features for a foreign exchange back-office platform built using **force.com** and **AWS** with 10,000+ daily trades.
- Designed endpoints in **Java** and **Apex** to receive foreign exchange quotes and execute and log trades through Oanda's trading platform.
- Wrote **Python** scripts to deploy data to Salesforce environments and execute **CircleCI** tests.
- Architected trade confirmation emails in **Java** and implemented a suite of unit tests using **mockito**.

Controls Member

UW Sailbot

Oct. 2017 – Dec. 2017 | Waterloo, ON

- Tested deep learning frameworks to use with compatibility in **ROS** and the on-board Jetson hardware for the autonomous sailboat.
- Built and iterated on a CNN classifier to detect an orange buoy in **Keras**. Tested transfer learning on the Inception model in **TensorFlow**.

Strategy Lead, Programmer

FIRST Robotics

Oct. 2016 – May. 2017 | Mississauga, ON

- Led a team of 5 people to collect metrics on teams using the **FRC Krawler** app. Performed statistical analysis in Excel.
- Implemented robot controls in the **FRC WPI** library in **Java** and learned about sensor communications to the **RoboRIO**.
- Briefly worked on PID controller for robot stability and autonomous driving.

TECHNOLOGIES

Python, JavaScript, Java, SQL, Unix
C++, Scheme, Node, Docker, AWS
TensorFlow, Scikit-Learn, Postgres

PROJECTS

Chess Game & Engine

- Designed the board, pieces, moves in **Java** with **Guava** data structures.
- Implemented a **Swing** GUI that facilitates player and AI games.
- Constructed a chess engine using Minimax.

Destin, 2nd Place

Global AI Hackathon

- Developed a chat-bot that responds to queries about different locations by analyzing Google searches, in a team of 6.
- Leveraged Microsoft's **LUIS API** to understand searches and integrated components in **Node**.

Financial Outlier Detection

Yale Hackathon

- Predicted if bank loans would be approved given a company's financial data.
- Parsed JPMorgan dataset and implemented regression and Gaussian distributions in **Scikit-Learn** to identify outliers.
- Retrieved files with **Flask** and displayed results with **matplotlib**.

HONORS & AWARDS

- **Bloomberg Code B AI Challenge.** Finished 3rd place and earned the design prize for an interactive Terminal display.
- **Mathematics Awards.** Achieved top 5% in the Fermat, Hypatia & Cayley Waterloo Math Contests.

EDUCATION

Bachelor of Computer Science

University of Waterloo

Sep. 2017 – May. 2022

- Deep Learning Specialization (Coursera), Data Structures and Algorithms, Object-Oriented Programming.
- DEEP Academy **leader** at the University of Toronto. **Chess** enthusiast. Active **hiker**.
